Thermal And Near infrared Sensor for carbon Observation (TANSO) on board the Greenhouse gases Observing SATellite (GOSAT)

Research Announcement

Appendix F

User Category, Glossary and Abbreviation List

F.1 User Category

Users of GOSAT products are categorized as follows.

F.1-1 Categories of GOSAT product users

| User category | Description |
|-------------------------------|--|
| Project staff (PS) | Researchers, scientists, staff members, etc. who belong to the GOSAT Project implementation body (Three Parties) or those who belong to other organizations but engage in the GOSAT Project as contractors to the Three Parties. |
| RA Investigator (RA) | A cooperative investigator who works with the PI to carry out the research activities represented by the PI and is registered by the Three Parties. |
| RA* Investigator (RA*) | An RA Investigator who researches on a theme in the algorithm or calibration/validation fields. |
| RA+ Investigator (RA+) | An RA Investigator who researches on a theme in the models or data application fields. |
| Science Team member (ST) | Member of the GOSAT Science Team (excluding those members who research on themes in the calibration/validation field.) |
| Science Team member* (ST*) | A Science Team member who researches on a theme in the algorithm or calibration/validation fields. |
| General user (GU) | A general GOSAT data user who does not fall under any of the above categories. |

F.2 Glossary and Abbreviations List

The following tables list up and explain the terms and abbreviations used in the RA.

Table F.2-1 Glossary

| Term | Description |
|-----------------|---|
| RA Investigator | An investigator who carries out the research on a theme selected in the RA. He or she works with the PI to carry out the research activities represented by the PI, and is registered by the Three Parties. |

| Term | Description |
|--|--|
| RA Selection and Evaluation Committee(The Committee) | A committee which selects research proposals submitted in response to the RA and provides the Three Parties with advice in the process of selecting research themes. The committee also evaluates the progress and results of the research by the selected RA Investigators and provides the Three Parties with necessary advice. |
| Apodization | It represents a convolution procedure using a pseudo weighting function (apodizing function) as a function of the optical path difference when the interferogram is Fourier-transformed into the spectrum. The interferogram is multiplied by the apodizing function before the Fourier transform. In the case of no apodization, the instrumental line shape function is the sinc function. Generally, the apodization makes the full width at half maximum of a instrumental line shape function larger, although unphysical oscillation of the sinc function is suppressed. |
| Along-track direction | Flight direction of the satellite on the spacecraft fixed coordinates. |
| Interferogram | Patterns of interferometric light obtained as a result of the following steps: i) split incident light into two beams using the beam splitter, ii) change one of the path lengths of the two split beams, and iii) let the two beams of light interfere with each other again. |
| Inverse model | A method (model) to estimate the sources and sinks and the emission and absorption of atmospheric constituents of interest, such as CO ₂ , using observation data such as the GOSAT data, with the combined use of atmospheric transport models and statistical techniques. |
| Aerosol | A microscopic liquid or solid particle floating in the atmosphere. |
| Original data | Products provided by JAXA or NIES. This should be distinguished from the data obtained as a result of the research carried out by RA Investigators. |
| Observation request | A request for specific data acquisition for a specific purpose, such as an observation over a calibration/validation site, which is not covered by GOSAT's routine observation (in lattice point). |
| Geometric correction | A process of correcting the positional information in observation data, such as band-to-band registration, correction of the latitude and longitudes of observation points based on elevation information, etc. |
| Gaseous column | The total amount of gas present in the vertical air column per unit area. |
| amount | (Number of molecules per unit area). |
| (column abundance) | |
| Gaseous | Vertical distribution of gaseous concentrations (Number of molecules per |
| concentration profile | unit area or volumetric ratio of the target species per unit area) |

| Term | Description |
|-----------------------|---|
| Cross-track direction | The direction perpendicular to the flight direction of the satellite on the |
| | satellite fixed coordinates. |
| Gain | The signal amplification factor used for amplifying signals to an appropriate signal processing level (voltage), set up by using commands for every brightness (light intensity) of observation targets. For GOSAT, there are three gain setting levels each for FTS and CAI: L (Low), M (Middle), and H (High). |
| Validation stage | GOSAT L2 and L3 products will undergo the following three validation stages before released and distributed to users. |
| | (i) Initial check |
| | Visual check on the result of processing of certain observation data, in order to confirm the validity of calibration of the sensor characteristics and data processing algorithms. |
| | (ii) Validation analysis: |
| | Comparison of GOSAT observation data with validation data, in order to evaluate the reliability of the products. |
| | (iii) Confirmation after the release: |
| | Check to be performed after releasing the products to limited users, to see if any problem with the products is reported after a certain period of time. |
| | The products are categorized into four stages in the process of these validation steps, namely U (Unchecked), P (Preliminarily checked), V (Validated), and C (Confirmed). These stages are called the "validation stages". |
| Corner cube | A trihedral made up of three planer reflectors which are perpendicular to each other. The light injected into the trihedral bounces on each of the three planes and will always return to the incident direction. |
| Science Team | An organization established for the purpose of providing the GOSAT Project with scientific advice. |
| Sunglint | Specular reflection of the sunlight on the water surface, in general. In this phenomenon, the specular reflection point is on the same plane as the sun and the sensor, and the reflection angle is the same as the incidence angle. However, as the intensity of the reflected light reaching the sensor is the strongest in the vicinity of such a reflection point, FTS observes the vicinity of specular reflection points for its water-surface observation. |
| Scan | The unit of acquisition of one interferogram by FTS. |

| Term | Description |
|------------------------------|--|
| Instrument function | Calibration performed with consideration given to the wavelength |
| calibration | dependence of the sensitivity. |
| Atmospheric transport | A numerical model to estimate the distribution of an atmospheric constituent |
| model | of interest (e.g., CO ₂ , CH ₄) and its variation under certain condition. In |
| | case of CO ₂ (or CH ₄), the model simulates the variation of its concentration |
| | based on the existing flux data, with meteorological data (air temperature, |
| | wind parameters, etc.) and chemical reactions in the atmosphere taken into |
| | consideration. |
| Dichroic filter | An optical filter which passes only light with specific wave number band and reflects the other. |
| Sun-synchronous | |
| sub-recurrent orbit | An orbit combining a sun-synchronous orbit and a sub-recurrent orbit, |
| | having the characteristics of the two. In the former orbit, the orbital plane of the satellite rotates once while the earth revolves the sun once (one |
| | revolution). In the latter orbit, the satellite returns to almost the same orbit |
| | at a certain interval (recurrence). GOSAT returns to almost the same |
| | footprint after 44 orbits in three days. The descending node time (local |
| | solar time) is adjusted to around 13 o'clock, and the local time at the nadir |
| | point of the satellite is almost the same time at medium and low latitudes. |
| C 1 C | |
| Carbon flux estimation model | A model to estimate the emission and absorption of carbons for a region (a |
| estiliation model | certain scale which the entire globe is divided into), based on the |
| | distributions of CO ₂ , etc. in the atmosphere obtained by GOSAT or |
| | otherwise together with meteorological data. |
| Observation in lattice | Regular observation of FTS on the fixed ground points (lattice points). In |
| point | all the five pointing modes (depending on the number of points per scan, 1, |
| | 3, 5, 7, or 9), the sensor observes the same footprint every recurrence after |
| | three days. |
| Specific point | Observation over specific ground points other than the lattice points |
| observation | observed in the routine observation, such as calibration/validation sites, |
| | observation points along a natural gas pipeline, etc. |
| Source inventory | Information concerning the location and volume of sources of carbon or |
| | other species. |
| Band pass filter | An optical filter which passes only light with wave numbers in a certain |
| | range, and rejects (attenuates) light with wave numbers outside that range. |

| Term | Description |
|----------------------|---|
| Full-width at half | An indicator of the spread (width) of a chevron-shaped function, such as |
| maximum (FWHM) | instrument function. It is defined as the difference in the wavelengths or |
| | wave numbers at the two points where the value of the function marks a half |
| | of the maximum. |
| Radiance calibration | Correction process of converting integer values (digital numbers) of |
| | observation data to the radiance unit, using various observation data. |
| | The abbreviation of the Principal Investigator, who represents the group of |
| PI (Principal | investigators who engage in the research activities on the research theme |
| Investigator) | adopted in the RA and serves as the contact person to the Three Parties on |
| | all matters relating to the joint research agreement. |
| Beam splitter | An optical device which splits a light flux into two. A part of the light |
| | injected into the beam splitter reflects back and the other part penetrates. A |
| | beam splitter which splits polarization components is called a polarized beam splitter. |
| Fourier Transform | An observing instrument which observes the interferometric light |
| Spectrometer (FTS) | (interferogram) acquired with the interferometer, and Fourier-transforms it |
| specialisment (112) | into radiance spectra. In the GOSAT Project, the spectrometer is applied to |
| | measure the absorption spectra of CO ₂ , CH ₄ , etc. |
| Product | An electronic file, containing the processed results of GOSAT's observation |
| | data, prepared in the predetermined format for distribution to users. |
| Product distribution | A request made by an RA investigator for provision of data products |
| request | necessary for implementing the research on the selected theme. |
| Spectral resolution | The minimum difference in wavelength, in case of the wavelength |
| | resolution, or wave number, in case of the wave number resolution, that the |
| | spectrometer can determine. |
| Polarization | Light of which the electric or magnetic field oscillates in a specific |
| | direction. |
| Maneuver | An activity to control the attitude, speed, etc., consequently orbit, of the |
| | spacecraft, by thrusting its control engine, etc. It is performed in order to |
| | maintain or change the spacecraft to the expected attitude or orbit. |
| Land ecosystem | A model which expresses the exchange processes of heat, water, carbon, etc. |
| model | (e.g., photosynthesis, respiration) between the land ecosystem, comprised of |
| | forest, pasture, etc., and the atmosphere. |

Table F.2-2 Abbreviation List

| Abbreviation | Description |
|--------------|---|
| ADEOS | ADvanced Earth Observation Satellite |
| ADEOS-II/GLI | ADvanced Earth Observation Satellite-II/GLobal Imager |
| AERONET | AErosol RObotic NETwork |
| AIRS | Atmospheric InfraRed Sounder |
| ALOS | Advanced Land Observing Satellite |
| ASE | Association of Space Explorers |
| ASTER | Advanced Spaceborne Thermal Emission and Reflection Radiometer |
| AT | Along Track |
| CALIPSO | Cloud-Aerosol Lidar and Infrared Pathfinder Satellite Observation |
| CAM | monitor CAMera |
| CME | Continuous CO2 Measuring Equipment |
| CNES | Centre National d'Etudes Spatiales (in French) : National Center of Space Studies (in English) |
| CSIRO | Commonwealth Scientific and Industrial Research Organization |
| CT | Cross Track |
| DB | Diode Box |
| DEM | Digital Elevation Model |
| ENVISAT | ENVIronmental SATellite |
| EOS | Earth Observing System (NASA Project) |
| FFT | Fast Fourier Transform |
| GAW | Global Atmosphere Watch (WMO Project) |
| GCP | Ground Control Point |
| GOME | Global Ozone Monitoring Experiment |
| GOSAT | Greenhouse gases Observing SATellite |
| GSFC | Goddard Space Flight Center(NASA) |
| GSHHS | Global Self-consistent Hierarchical High-resolution Shorelines |
| HDF | Hierarchical Data Format |
| HITRAN | HIgh-resolution TRANsmission molecular absorption database |
| HSTAR | High-resolution System for Transfer of Atmospheric Radiation |
| IASI | Infared Atmospheric Sounding Interferometer |
| IGM | InterferoGraM |

| Abbreviation | Description |
|--------------|--|
| IIR | Imaging Infrared Radiometer |
| ILAS | Improved Limb Atmospheric Spectrometer |
| IMG | Interferometric Monitor for Greenhouse Gas |
| IRS | Indian Remote Sensing satellite |
| JAXA | Japan Aerospace Exploration Agency |
| JERS | Japanese Earth Resources Satellite |
| JPL | Jet Propulsion Laboratory |
| LLM | Light Load Mode |
| LUT | Look Up Table |
| MAP | Maximum A Posteriori |
| MDP | Mission Data Processor |
| MODIS | MODerate resolution Imaging Spectroradiometer |
| MOE | Ministry Of the Environment of Japan |
| MOS | Marine Observation Satellite |
| MTF | Modulation Transfer Function |
| NDACC | Network for the Detection of Atmospheric Composition Change |
| NDVI | Normalized Difference Vegetation Index |
| NetCDF | Network Common Data Form |
| NIES | National Institute for Environmental Studies (Japan) |
| NIR | Near InfraRed |
| NOAA | National Oceanic and Atmospheric Administration |
| OCO | Orbiting Carbon Observatory (NASA Spacecraft) |
| OMI | Ozone Monitoring Instrument |
| POLDER | POLarization and Directionality of the Earth's Reflectances |
| PPDF | Photon Pathlength Distribution Function |
| PRISM | Panchromatic Remote sensing Instrument for Stereo Mapping |
| U,P,V,C | Unchecked, Preliminary checked, Validated, Confirmed (Stages of Validation) |
| RA | Research Announcement |
| RAMCES | Reseau Atmospherique de Mesure des Composes a Effet de Serre (in French) : Near Real Time CO2 Concentration (in English) |
| ROLO | RObotic Lunar Observatory |
| RSTAR | Remote sensing System for Transfer of Atmospheric Radiation |

| Abbreviation | Description |
|--------------|--|
| SAR | Synthetic Aperture Radar |
| SCIAMACHY | SCanning Imaging Absorption spectroMeter for Atmospheric CartograpHY |
| S-LLM | Super-Light Load Mode |
| SNR | Signal to Noise Ratio |
| SPOT | Satellite Pour l'Observation de la Terre |
| SPRINTARS | Spectral Radiation-Transport Model for Aerosol Species |
| ST | Science Team |
| SWIR | Short Wavelength InfraRed / Short Wave Infrared Radiometer |
| TANSO | Thermal And Near infrared Sensor for carbon Observation |
| TANSO-CAI | TANSO—Cloud and Aerosol Imager |
| TANSO-FTS | TANSO—Fourier Transform Spectrometer |
| TCCON | Total Carbon Column Observing Network |
| TES | Tropospheric Emission Spectrometer |
| TIR | Thermal Infrared Radiometer |
| TOMS | Total Ozone Mapping Spectrometer |
| TRANSCOM | atmospheric tracer TRANSport model interCOMparison project |
| TRMM | Tropical Rainfall Measuring Mission |
| USGS | U.S. Geological Survey |
| VGA | Video Graphics Array |
| WDCGG | World Data Centre for Greenhouse Gases |
| WFC | high-resolution Wide Field Camera |
| WMO | World Meteorological Organization |
| WWW | World Wide Web |
| ZPD | Zero Path Difference |
